A4

Silicone wristband fit guide

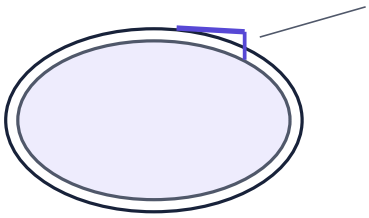
Print at 100% / Actual size

1. Check the print scale

Match the paper size in your printer settings. Lay a rigid ruler against both marks. If either is off, adjust the scale and reprint.

2. Wrap and read

Cut out the strip along its outline, including the zero edge. Wrap it flat where the band will sit, with the scale facing out. Let the strip touch your skin without pressing in. Lay the zero edge on top and read the millimetres where it meets the scale.



Zero edge

Read the scale at the overlap.

Wrist circumference

_____ mm

3. Try the target model

A fixed silicone loop must pass over the widest part of the hand. Try a sample in the intended style and size before a bulk order. Check hand clearance, then bend your wrist to judge the fit.
